FolderDefence Pro is a lightweight software application whose purpose is to help you lock, hide, and password-protect your files and folders. Installation type You can deploy the utility on your system via a normal or stealth installation mode. The latter one can be employed in case you do not want the tool to appear in the Add/Remove Programs and Start Menu. You can install it on pen drives or other external devices, and run it directly on the target system from the storage device. User interface FolderDefence Pro sports a clean and straightforward design that allows you to set up the dedicated parameters in no time. In addition, you may enable or disable the protection mode with just a few clicks. A help manual is included in the package in case you have any questions regarding the tool's locking capabilities. Security features The application offers you the possibility to apply several security modes to your files or folders in order to prevent other users from viewing sensitive information. You can hide or lock items, both hide and lock data, make files read-only, or deny execution. Configuration settings and extra tools FolderDefence Pro helps you configure a master password for protecting your settings, and build up a list with programs that are allowed to bypass protection and access the processed files. Plus, you can run the utility at Windows startup, remove links to protected items from the 'Recent' folder, and delete FolderDefence Pro from the list with most used programs. Last but not least, the program comes packed with a built-in file shredder for helping you wipe out files permanently from your system so they cannot be recovered. Batch actions can be employed for processing multiple files at the same time. Bottom line All in all, FolderDefence Pro comes packed with several handy features for helping you make sure other users cannot gain access to your private information. The application has not been updated for a while so you can make use of its capabilities especially on older operating systems, like Windows XP, Vista, 7, 2003, and 2008. Password Protect folders and prevent viewing of hidden files by others. FolderDefence Pro encrypts all your files and folders to protect their contents, and will also hide these files and folders in Windows Explorer. All the special folders listed in Explorer are protected by default, including:- Recycle Bin- Desktop- My Documents- My Music- My Pictures- My Videos- Temporary Internet Files- Windows/System Volume Information- Vista Caching Files. FolderDefence Pro can protect multiple folders/files and their subfolders in one go. FolderDefence Pro can also protect a folder tree in Windows Explorer. File can be locked at multiple levels. The locks can be removed or given exceptions in order to allow certain applications to access the locked files. You can protect your personal data by locking or hiding them. FolderDefence Pro comes with a Windows Explorer extension that lets you "Type-Hint" some shortcuts to the encryption software. This makes it possible to type folders such as: "Examples", "Downloads" or "Desktop" and the system will automatically search for a "FolderDefence Pro" shortcut. By typing the above-mentioned shortcuts, your hidden files will be found and encrypted automatically. FolderDefence Pro is a standalone Windows Explorer extension that you can use for encrypting your files. The software has been built with ease-of-use and security in mind. You can lock or hide any folder by just typing a special folder name. Alternatively, you can select any file or folder and password protect it, the Windows Explorer can then display its contents as a folder icon instead of a file icon. Thank you for downloading and downloading from the blog.>It is curious that it is not the other way round; the Linux guys >have all the fun. _Why_? Linux is faster than NT, yet everyone is convinced it's the other way around. >My own guess is that for decades the Internet came into existence >because Unix wanted to become a successful commercial product, and >this will have had a lot to do with the lack of attention it has >received from the Cyberspace Community. If I'm correct then Unix >isn't dead by any means; it is merely dormant, and we're waiting for >somebody to wake it up again._ "Unix is very vigorous and alive - it keeps crawling out of the shadows to which it has been consigned."
